

SERVICE THAT COUNTS

Synthetic Turf

Synthetic turf is the ideal grass alternative for any landscape project. We do new installations and conversions, while having access to the most natural-feeling and built-to-last synthetic grass designed for any purpose or style. Let us design and install your dream landscape.

These are some of the benefits:

- Lowers water bill
- Eliminates endless mowing
- Eliminates dead, patchy, or muddy grass
- Eliminates costs of fertilizers and pesticides for turf care
- Provides a beautiful, clean-looking landscape all-year-round

OUR COMMITMENT TO OUR CUSTOMERS

Committed to beautifying and enhancing local community and business landscapes by providing our customers with a One-Stop-Shop option for all of your residential and commercial landscape construction projects.

Reliable. Strong. Trustworthy.

EXPERIENCE COUNTS

*Established for over 30 years, First Choice
is the leader of Landscaping!*

Landscape Construction & Design

First Choice Tree Service's Landscape Construction Department has been serving the Southern Nevada area since 2012. Our talented staff is exceptionally hands on from creating landscape design concepts to the completion of your landscape project. Our Landscape Construction Department has a combined experience of over 100 years in all aspects of commercial and residential landscape in the Las Vegas Valley. We can handle any job, from installing new plants, trees, and shrubs to irrigation systems, mulch, soil, and turf. We also install desertscapes, hardscapes, and grass conversions.

Tree Transplant Services

Our crews are trained in large tree boxing, tree salvage and relocation. We offer pre and post-transplant care and can provide tree salvage both on and off-site. Pre-transplant services include anti-transpiration sprays to help reduce water loss and bio-stimulant treatments to encourage root growth. Post-transplant care includes root stimulation treatments, cabling, pruning, and fertilization. We use the latest tree excavation equipment that helps us to achieve higher survival rates of transplanted trees.

Xeriscape

Xeriscaping is the process of landscaping, or gardening that reduces the need for irrigation, requiring little maintenance and is drought tolerant. With our help, your yard becomes the envy of all the neighbors. Let our amazing design team create a landscape that's in harmony with its environment. We create beautiful designs that are functional and timeless.

Commercial properties especially benefit from these water-smart landscapes. No need to sacrifice the look of a lush green landscape, we have options that are sure to conserve water while looking great!

Waterjetting

First Choice Tree Service uses a propriety water jet vacuum recovery technology system that oxygenates and hydrates the soil while simultaneously applying root stimulation known as "Water Jetting" or "Hydro Jetting". This is a controlled, less invasive process that minimizes potential damage to surrounding areas or utility lines and yields higher rates of survivability. This procedure can be used to achieve many things like transplanting a tree to a new location or installing root barrier for trees whose roots may be causing damage to surrounding walls, walkways or hardscapes, and for pot holing to locate underground utilities.

HOA Enhancements

If you manage a Home Owner's Association and need a landscape enhancement, we can help! If we don't have the plant material you are looking for in our nursery, we can source exactly what you want, purchase it, and install it. Not sure what will be sustainable for your community and need a recommendation? Our certified Arborists can provide their professional advice.

We also specialize in structural pruning techniques and have the highest rating for arboriculture through the TCIA.
