## TREE & SHRUB Fertilization

Our native desert soil lacking in organic matter, nutrients and an unbalanced PH are unfavorable conditions for plant material in our residential landscapes. First Choice Tree Service uses a combination of several macro and micro nutrients along with specific PH balancing acids to provide homeowners, communities, and businesses with the proper mixture to maintain a lush green landscape.

### Services include:

- Canopy & Deep-Root Fertilization
- Soil & Foliar Application

## Fresh Wood Chips

Annual placement of fresh wood chips around trees and shrubs is very beneficial to maintain their health. Other benefits include moisture retention; improved soil biology and fertility; inhibit plant diseases; provide nutrient rich humus as it decomposes.

APHIDS

## Insect & Disease Control

Several trees, shrubs and turf grasses are susceptible to a variety of insect infestations and diseases such as fungus, spider mites, aphids, and borers. Disease and pests can severely impact the health of your trees, shrubs, and turf grasses. Take advantage of our plant health care experts to inspect your property and advise you with specific treatments needed to maintain a healthy, beautiful landscape.

## ARBORjet Revolution Health Solutions

Trunk injections are a perfect alternative method for controlling insects, disease, and nutrient deficiencies contrary to spraying and soil applications.

- Safe around sensitive areas such as streams, rivers and fish ponds
- No spray drift or leaching into ground water
- Convenient in public areas with less disruption and lower risk

## Powerful Weed Control

Did you know you can prevent weeds from emerging in your landscape? Apply a pre-emergent herbicide. Pre-emergent herbicides work by creating a protective seal around the seeds to prevent germination of weeds and eliminates any chance of growth.

### Already have weeds?

An application of a post-emergent herbicide will do the trick! Post-emergent weed killers travel down the stalk of the plant and into the root system, killing the weeds after they've already started growth above the ground. Even broadleaf weeds in lawn areas are eliminated without damaging your turf.
